

## NUMBERS 7, 8, 9

Introduction	v
Contents	vii
New rheological and porosity equations for steady-state compaction <i>Bernard P. Boudreau and Richard H. Bennett</i>	517
Sedimentary organic matter preservation: a test for selective degradation under oxic conditions <i>John I. Hedges, Feng Sheng Hu, Allan H. Devol, Hilairy E. Hartnett, Elizabeth Tsamakis, and Richard G. Keil</i>	529
Anomalous enrichments of iron monosulfide in euxinic marine sediments and the role of H <sub>2</sub> S in iron sulfide transformations: examples from Effingham Inlet, Orca Basin, and the Black Sea <i>Matthew T. Hurtgen, Timothy W. Lyons, Ellery D. Ingall, and Anna M. Cruse</i>	556
Stable isotope tracing of anaerobic methane oxidation in the gassy sediments of Eckernforde Bay, German Baltic Sea <i>Christopher S. Martens, Daniel B. Albert, and M.J. Alperin</i>	589
Global chemical erosion over the last 250 my: variations due to changes in paleogeography, paleoclimate, and paleogeology <i>Mark T. Gibbs, Gregg J.S. Bluth, Peter J. Fawcett, and Lee R. Kump</i>	611
An interferometric study of the dissolution kinetics of anorthite: the role of reactive surface area <i>A. Lüttge, E.W. Bolton, and A.C. Lasaga</i>	652
Bond strength and the relative weathering rates of simple orthosilicates <i>Michael A. Velbel</i>	679
The evolution of the sulfur cycle <i>D.E. Canfield and R. Raiswell</i>	697
Marine organic phosphorus cycling: novel insights from nuclear magnetic reso- nance <i>Lauren Lisa Clark, Ellery D. Ingall, and Ronald Benner</i>	724
The role of carbonates in the evolution of early Martian Oceans <i>John W. Morse and Giles M. Marion</i>	738
Biogeochemical responses of the carbon cycle to natural and human perturba- tions: past, present, and future <i>Leah May B. Ver, Fred T. Mackenzie, and Abraham Lerman</i>	762
